

Lake Lawne Stormwater Reuse Pond

Background: Lake Lawne is a nutrient impaired waterbody. Nitrogen and Phosphorus loads to the lake must be reduced.

Project Status : Construction to start late 2017

Commission District: 6

Project Details

Drainage Basin: Little Wekiva.

BMP Type: Pollution reduction through stormwater reused for irrigation.

Targeted Pollutant(s): Nitrogen and Phosphate, Total Suspended Sediment.

Cost: \$1.7M USD

Project Goals

- Improve water quality in Lake Lawne.
- Reduce the amount of pollution entering Lake Lawne.
- Reduce the dependence on freshwater supplies used for irrigation.
